PROFESSIONAL SUMMARY

Full-stack software developer with backend strength and 3.5 years of enterprise Java experience at ING Belgium via Accenture, plus full-stack ASP.NET Core, React, and Node.js work from BCIT projects. Owned features end-to-end on a major bank's Finance and Risk platform, contributed to a Java 8 to 21 migration, and led a security-driven PrimeFaces upgrade. Solid in OOP, REST API design, relational data modeling, and CI/CD-driven development.

PROFESSIONAL EXPERIENCE

Application Development Analyst

Dec 2022 – Mar 2024

Application Development Associate

Nov 2020 – Dec 2022

Accenture | Client: ING Bank Belgium (Finance & Risk Tribe)

Pune & New Delhi, India

- Worked as a Java developer on the Finance and Risk platform, contributing across 8 banking applications covering commissions, suspense accounts, and finance transformation, in a mixed architecture spanning Spring Batch jobs, monolithic services, and microservices.
- Built the Trailer Fees feature on the commissions platform, implementing Spring Batch processing pipelines that ingested data from the bank's data lake and data warehouse alongside manual uploads, with monthly and yearly cycles for independent-agent commission management.
- Contributed to a Java 8 to Java 21 migration, working through module system changes, removed JDK APIs, GC behavior shifts, and a forced Hibernate upgrade across the dependency tree.
- Owned the remediation of jQuery XSS vulnerabilities identified by penetration testing, leading a PrimeFaces upgrade across affected applications to close findings ahead of release deadlines.
- Built and maintained MySQL-backed services with Hibernate and JSF/PrimeFaces frontends, applying OOP, design patterns, and clean version control practices reviewed by senior developers.
- Used Jenkins, Docker, OpenShift, Azure DevOps, and Maven daily for source control, EAR/WAR build pipelines, and team backlog management; troubleshooted production issues across Java and SQL environments alongside the team.

ACADEMIC & TECHNICAL PROJECTS

Money Confidence For Life

Completed, Apr – May 2026

BCIT SSD Industry Project

GitHub: [view repo](#)

A youth-focused financial literacy web app built for a Canadian industry client, featuring scenario-based learning, goal tracking, and parental consent flows.

- Partnered with the client as part of a team of 5 to deliver a working prototype for youth financial education.
- Led requirements analysis with the client: translating stakeholder feedback into backlog items, ERD updates, and API contracts.
- Built 15+ reusable React + TypeScript components and 10+ REST API endpoints on ASP.NET Core Web API, including admin analytics dashboards and database schema/seeder for scenario-based learning flows.

CareCompass

Completed, Jan – Apr 2026

BCIT SSD Internal Project

GitHub: [view repo](#)

A web platform connecting clients with counsellors, featuring subscription management, payment processing, and role-based dashboards for counsellors, managers, and admins.

- Served as team lead for 5 developers, introducing backlog grooming and sprint planning that kept the project on schedule.
- Built 10+ full-stack features end-to-end across ASP.NET Core MVC backend and Razor views/dashboards, applying layered architecture with controllers, services, and repository patterns.
- Integrated PayPal REST API for payments, Brevo for email delivery, and Google reCAPTCHA for bot protection.
- Hardened authentication with ASP.NET Core Identity, email confirmation, lockout, and role-based access for Admin, Manager, and Counsellor roles.

Portfolio CMS

Completed, Jan 2026

BCIT SSD Node.js Web Development

GitHub: [view repo](#)

A solo full-stack content management system with public portfolio site and authenticated admin CMS, built with Node.js, Express, and MongoDB.

- Designed and built 25+ routes covering public browsing and admin CRUD, four Mongoose models (User, Project, Category, Contact), and EJS views with a repository-pattern data layer.
- Implemented three-tier role-based access control (USER / MODERATOR / ADMIN) with custom middleware, bcrypt password hashing, and MongoDB session storage via connect-mongo.
- Built a Multer-based image upload pipeline with featured-image gallery management and safe-delete guards preventing deletion of referenced data.
- Added security audit logging capturing timestamp, user ID, role, HTTP method, path, and IP on every access denial.

EDUCATION

Software Systems Developer

Sep 2025 – May 2026

British Columbia Institute of Technology (BCIT)

Vancouver, BC

Bachelor of Technology, Computer Science & Engineering

Jul 2016 – Jun 2020

JECRC University | CGPA: 8.32 / 10

Rajasthan, India

CERTIFICATIONS

Tech Reliability Fundamentals

Nov 2023

SRE concepts: SLIs/SLOs, error budgets, incident response

ING Bank Belgium

Certified Automation Full-Stack Engineer (Advanced)

Mar 2023

Full-stack development with CI/CD automation, build & release management

Accenture

TECHNICAL SKILLS

Programming Languages: Java, C#, SQL, TypeScript, JavaScript

Frameworks & Libraries: Spring Boot, Spring Batch, Hibernate, ASP.NET Core MVC, ASP.NET Core Web API, Entity Framework Core, React, Node.js, Express, JSF, PrimeFaces

Web Technologies: HTML5, CSS3, RESTful APIs, OpenAPI/Swagger

Databases: MySQL, SQL Server, Oracle Database, MongoDB, SQLite, DynamoDB

Cloud & DevOps: Jenkins, Docker, OpenShift, Azure DevOps, GitHub Actions, AWS (EC2, Lambda, S3, RDS, DynamoDB, CloudWatch, API Gateway), Maven, CI/CD Pipelines

Testing & IDEs: JUnit, IntelliJ IDEA, Visual Studio, VS Code

AI Tools: GitHub Copilot, Claude, ChatGPT (daily use for prototyping, debugging, and documentation)

Engineering Concepts: Object-Oriented Programming, Design Patterns, RESTful APIs, Relational Data Modeling, Role-Based Access Control, Layered Architecture, Software Architecture

Methodologies & Tools: Agile, Scrum, Kanban, Jira, Confluence, Git, GitHub
