

Mahima Sharma

Software Developer

Vancouver, BC | 778-798-9503 | sharmamahima174@gmail.com

linkedin.com/in/mahimasharma1997/ | mahimasharma.vercel.app | github.com/mahima-bcit

Recent BCIT graduate (May 2026) with 3.5 years of software engineering experience at Accenture, developing Finance and Risk platform. Strong foundation in Java, OOP, REST APIs, relational databases, with hands-on experience in code review, automated testing, and Agile delivery. Daily user of AI coding tools for prototyping, debugging, and documentation. Seeking a Full-Stack or Backend Software Engineer role leveraging my expertise in Java and ASP.NET.

Education

Software Systems Developer

Sep 2025 – May 2026

British Columbia Institute of Technology (BCIT) | GPA: 97% (With Distinction)

Vancouver, BC

Bachelor of Technology, Computer Science & Engineering

Jul 2016 – Jun 2020

JECRC University | CGPA: 8.32 / 10

Rajasthan, India

Professional experience

Tech Lead & Full-Stack Developer

Apr 2026 – May 2026

BCIT Internship | Client: Money Confidence For Life

Vancouver, BC

- Built a youth-focused financial literacy MVP within a 4-week sprint using React, TypeScript, and ASP.NET Core Web API.
- Collaborated with the CEO to translate requirements into actionable backlog items, ERD updates, and API contracts.
- Built 15+ reusable React + TypeScript components and 10+ REST API endpoints on ASP.NET Core Web API, including admin analytics dashboards and database schema/seeder for scenario-based learning flows.

Java Developer

Nov 2020 – Mar 2024

Accenture | Client: ING Bank Belgium (Finance & Risk Tribe)

Pune & New Delhi, India

- Maintained and enhanced existing Java-based finance and risk applications across 8 banking systems, implementing new features, resolving bugs, and optimizing codebases by removing deprecated components.
- Built the Trailer Fees feature for the commissions platform using Spring Batch pipelines to ingest data from the bank's data lake, data warehouse, and manual uploads, supporting monthly and annual commission cycles for thousands of independent agents.
- Optimized four enterprise data transformation applications by implementing Spring Batch parallel processing and robust error handling, reducing processing bottlenecks and improving the reliability of daily data flows involving 10+ file types.
- Enhanced a core payment processing and suspense accounts platform by modernizing the user interface with JSF/PrimeFaces for improved UX and implementing query-level optimizations to accelerate reporting capabilities and anomaly detection.
- Mitigated security vulnerabilities by upgrading Java, Hibernate, and Spring dependencies while adhering to strict app runtime constraints.
- Led a PrimeFaces upgrade across affected applications to fix jQuery XSS security vulnerabilities identified during penetration testing, closing the findings before release deadlines.
- Co-led migration of the team's shared development database to a Docker and Liquibase-based local setup, giving each developer an isolated environment and eliminating cross-developer data conflicts, crashes, and locked accounts.

Academic projects

CareCompass

Completed, Jan 2026 – Apr 2026

BCIT Team Project

GitHub: [view repo](#)

A web platform connecting clients with counsellors, featuring subscription management, payment processing, and role-based dashboards.

- Integrated PayPal REST API for end-to-end payment processing, embedding server-side amount validation to prevent client-side tampering and handling zero-discount edge cases.
- Served as team lead for 5 developers, introducing backlog grooming and sprint planning that kept the project on schedule.
- Built 10+ full-stack features end-to-end across ASP.NET Core MVC backend and Razor views/dashboards, applying layered architecture with controllers, services, and repository patterns.
- Hardened authentication with ASP.NET Core Identity, email confirmation, logout, and role-based access for Admin, Manager, and Counsellor roles.

Portfolio CMS

Completed, Jan 2026

BCIT SSD Node.js Web Development

GitHub: [view repo](#)

A solo full-stack content management system built with Node.js, Express, and MongoDB.

- Built a full-stack CMS using Node.js, Express, MongoDB, Mongoose, and EJS, with 25+ routes and admin CRUD workflows.
- Implemented authentication, role-based access control, bcrypt password hashing, and MongoDB-backed session storage.
- Designed a repository-pattern data layer, Multer image upload workflow, safe-delete guards, and access-denied audit logging.

Skills

AI Tools: GitHub Copilot, Claude, ChatGPT for prototyping, debugging, documentation, and development support

Languages: Java, JavaScript, TypeScript, C#, SQL

Backend & Frameworks: Spring Boot, Spring Batch, Hibernate, Node.js, Express, ASP.NET Core MVC, ASP.NET Core Web API

Frontend: React, Angular, JSF, PrimeFaces, HTML5, CSS3

Databases: MySQL, SQL Server, Oracle Database, MongoDB, SQLite

APIs & Web: RESTful APIs, OpenAPI/Swagger, layered architecture, role-based access control

Cloud & DevOps: Docker, Linux/Unix, Azure DevOps, GitHub Actions, Maven, CI/CD pipelines

Testing & Tools: JUnit, Git, GitHub, Jira, Confluence, IntelliJ IDEA, Visual Studio, VS Code

Engineering Concepts: object-oriented programming, design patterns, data structures, relational data modeling, software architecture, agile, scrum, kanban
