PROFESSIONAL SUMMARY

Full-stack software engineer with 3.5+ years of enterprise experience in Java/Spring at Accenture and full-stack ASP.NET Core + React work at BCIT. Track record of maintaining production systems (99.9% uptime, 50+ incidents resolved), modernizing legacy services (IBM WebSphere migration), and shipping features end-to-end. Backend-strong with solid frontend, OOP, and production CI/CD experience.

PROFESSIONAL EXPERIENCE

Software Engineer

Nov 2020 – Mar 2024

Accenture

Pune, India

- Developed and maintained Spring Batch and Spring MVC enterprise applications in Java, applying OOP, design patterns, and clean version control practices.
- Led migration of legacy Spring applications to IBM WebSphere, improving scalability, security, and maintainability across distributed systems.
- Automated deployments through internal CI/CD DevOps pipelines, reducing release cycle time and deployment failures for the team.
- Designed reporting dashboards with telemetry and encoding pipelines to process 5,000+ financial records daily and streamline commission calculations.
- Resolved 50+ production incidents by troubleshooting issues across Java and SQL environments, contributing as part of the team to 99.9% system uptime.
- Mentored 3 junior developers on engineering principles, code reviews, and Scrum practices, and collaborated with cross-functional QA, product, and DevOps teams to deliver features on schedule.

ACADEMIC & TECHNICAL PROJECTS

Money Confidence For Life

Completed, Apr–May 2026

BCIT SSD Industry Project

GitHub: [view repo](#)

A youth-focused financial literacy web app built for a Canadian industry client, featuring scenario-based learning, goal tracking, and parental consent flows.

- Partnered with the client as part of a team of 5 to deliver a working prototype for youth financial education.
- Led requirements analysis with the client: translating stakeholder feedback into backlog items, ERD updates, and API contracts.
- Built 15+ reusable React + TypeScript components and 10+ REST API endpoints on ASP.NET Core Web API, including admin analytics dashboards and database schema/seeders for scenario-based learning flows.

CareCompass

Completed, Jan–Apr 2026

BCIT SSD Internal Project

GitHub: [view repo](#)

A web platform connecting clients with counsellors, featuring subscription management, payment processing, and role-based dashboards for counsellors, managers, and admins.

- Served as team lead for 5 developers, introducing backlog grooming and sprint planning that kept the project on schedule.

- Built 10+ full-stack features end-to-end across ASP.NET Core MVC backend and Razor views/dashboards, applying layered architecture with controllers, services, and repository patterns.
- Integrated PayPal REST API for payments, Brevo for email delivery, and Google reCAPTCHA for bot protection.
- Hardened authentication with ASP.NET Core Identity, email confirmation, logout, and role-based access for Admin, Manager, and Counsellor roles.

EDUCATION

Software Systems Developer

British Columbia Institute of Technology (BCIT)

Sep 2025 – May 2026

Vancouver, BC

Bachelor of Technology, Computer Science & Engineering

JECRC University • CGPA: 8.32 / 10

Jul 2016 – Jul 2020

Rajasthan, India

TECHNICAL SKILLS

Programming Languages: C#, Java, SQL, TypeScript, JavaScript

Frameworks & Libraries: ASP.NET Core MVC, ASP.NET Core Web API, Entity Framework Core, React, Node.js, Express, Angular, Spring Batch, Spring MVC, JSF, PrimeFaces

Web Technologies: HTML5, CSS3, RESTful APIs, OpenAPI/Swagger

Databases: SQL Server (SSMS), Oracle Database, SQL Developer, MongoDB, SQLite

Cloud & DevOps: Docker, CI/CD Pipelines, Azure DevOps, Microsoft Azure, AWS, Maven

Testing & IDEs: JUnit, IntelliJ IDEA, Visual Studio, VS Code

AI Tools: GitHub Copilot, Claude, ChatGPT (daily use for prototyping, debugging, and documentation)

Engineering Concepts: Object-Oriented Programming, Design Patterns, RESTful APIs, Microservices, Distributed Systems, Software Architecture

Methodologies & Tools: Agile, Scrum, Kanban, Jira, Confluence, Git, GitHub
